

Who We Are

Alpha Net is a global provider of technology services enabling clients to reach their business goals

Alpha Net is a global software consulting and application development company specialized in tackling the most complex business problems through the use of technology, maximizing investment performance across portfolio of business critical applications, while reducing time and risk, since 1999.

Our core portfolio comprises applications development. We deliver a broad portfolio of services to clients in the manufacturing, financial services, healthcare, and communications with a team committed to deliver innovation.

Alpha Net currently has development centers in **Santa Clara**, CA , US and **Chandigarh**, India. The Alpha Net's development centers are state-of-the-art facilities in terms of their infrastructure, data security, and physical location projection. The development centers have IT infrastructures that span from Open Systems environments like Linux to the latest Windows-based systems. The centers have high-speed data links that connect them with each other and with the clients to create seamless virtual teams. Since we know security is important to you, the networks are protected through multiple layers of firewalls and DMZ implementations to ensure our customers' assets are protected.

Some Key Facts and Numbers

- ~ Current company is in State of California, United States of America.
- ~ Parent Company founded in State of New York, United States of America in Dec 1999
- ~ Indian Operations started in Dec 2003.
- ~ Current Gross Revenues of company are 7 Million USD.
- ~ Total employee strength in USA and India: 75
- ~ Awarded "**Small Business Specialist**" certification from Microsoft Corporation
- ~ Tie up with Chandigarh Engineering College (CEC), Landran to automate its all processes due to the demand of modern era.
- ~ Memorandum of Understanding (MoU) with Chandigarh Engineering College (CEC), Landran to provide training and placements of its students from MCA, CSE and other IT disciplines.
- ~ Organize all events in Chitkara Institute of Engineering and Technology (CIET), Rajpura, Chandigarh in the years 2008 & 2009.
- ~ Memorandum of Understanding (MoU) with Chandigarh College of Engineering and Technology (CCET), Chandigarh for consultancy projects.
- ~ Placement for brilliant student(s) from the training to the company and after certain period of time according to their performance shift them to the US office on H1B/L1B Visa.

Our Strength

The Alpha Net Strength

- ~ **people** focused on personal growth and continuous learning
- ~ **commitment** to excellence
- ~ **rapid response** to your needs
- ~ **process orientation** & strict adherence to development methodologies
- ~ **timely adoption** & assimilation of technologies
- ~ **collaborative** business model
- ~ **flexibility** in development model
- ~ **honest, open and ethical** relationships with all

We provide expertise in the following areas:

Staff Augmentation: Alpha Net Staff Augmentation provides a short and long term solution for organizations the need help managing the people, processes and technologies that deliver and sustain value in the complex IT implementation environment. Often organizations have projects the require the focus of key resources; Alpha Net Staff Augmentation can assist these organizations on a project specific basis to ensure projects are completed on schedule. Alpha Net Staff Augmentation matches experienced IT professionals and internal staff to create a powerful team that support development while saving organizations the time and money of developing such teams in-house.

Risk sharing projects: Alpha Net risk sharing services provides a short and long term solution for organizations that need help implementing advanced technologies and like to manage their people & processes. Since Information technology is intended to help our clients become more effective in their business operations. We are open to linking our charges for a project with the level of business benefit our clients realize or assist clients on a project by assuming + & - % risk to ensure projects are completed on scheduled time & cost.

Fixed bid projects: Our 'fixed bid' projects model provides the framework for a win-win scenario, in which the client is assured of quality deliverables within budget, on schedule. At the same time, we are assured of rewards for successful and on-time delivery of the assigned task. Clients also have the flexibility to choose a transaction-based model, where they pay us as and when realize revenues and is linked to the volume of transaction handled by the system we develop.

Time & Material projects: Our clients can utilize the services of our highly qualified resources on time and material assignments for consulting. We offer time and material services for both onsite as well as offshore assignments. In such engagements, the client has complete flexibility in working with our Associate and engaging them in tasks that match their expertise.

Our Core Competencies

Our multiple process models address specific customer and project needs and span Domain Service, Maintenance, Testing, Conversion and Development process models.

“The hallmark of The AlphaNet process is that we tailor our approach to meet the needs of each client. There are no ‘cookie cutter’ answers”

We build personal relationships with our staff to understand their goals, and we leverage their strengths to improve the services they provide. We pride ourselves to be the Agile & Flexible solution delivery provider. Alpha Net & our developers could provide services in most flexible environments.

Consulting and Implementation: Consulting and Implementation services in ERP domain (primarily in SAP R/3 and Oracle Applications) and advances Internet technologies i.e. Microsoft .NET, J2EE framework and open technologies like Ruby, PHP, Python, etc.

Content Development and Technical Writing: We have written multiple technical books for our US Clients. Some of the books which we have written and are being used in training for US companies are:

- ~ OOP Programming using Java
- ~ J2EE Programming
- ~ Introduction to Struts
- ~ .NET framework
- ~ ASP.NET
- ~ XML
- ~ Web services

Enterprise Application Development: We are developing Web solutions for complex integration issues between ERP and legacy systems. We are involved in multiple offshore projects for developing Enterprise Applications using Java and .NET technologies. Alpha Net specializes in providing tailor-made outsourcing solutions for development and maintenance of your non-core business requirements using reliable, secure and agile infrastructure & resources

Training in Advanced Technologies: Training in Advanced technologies: Shortage of skilled manpower prompted us to open Training division to cater to our company needs and for outside world as well. Our training division is providing training in following streams:

1. Enterprise Application development using Java & DOTNET Technologies
2. Mobile Application development using Java & DOTNET Technologies
3. Web Application development using Java, DOTNET & PHP
4. Games development using C++, C#, Java
5. Hardware Interfacing development using C, C++, VC++
6. Device Driver development using Assembly Language
7. Embedded Devices design and development using Assembly Language and C.

Our Prestigious Clients

List below includes our partial client base.

- ~ Wells Fargo Bank
- ~ Cisco
- ~ VMWare Inc
- ~ Dupont
- ~ International Paper
- ~ Solyndra Inc
- ~ AutoDesk Inc.
- ~ Applied Materials
- ~ Silicon Graphics Inc
- ~ Gold Bank
- ~ Sappi Fine Paper
- ~ Sinai Medical Center
- ~ IBM
- ~ Adaptec Inc
- ~ LandMark Education Corporation
- ~ FormFactor Inc
- ~ Transbay Cable
- ~ SteelRiver Infrastructure Partners
- ~ Transcontinental Media Group
- ~ Readytouch Inc
- ~ Nextg Networks
- ~ Novartis
- ~ BioMed Systems Inc
- ~ Showmypc.com
- ~ NEC

and many more.....

Current Projects

We are involved in the development of following projects:

BioMed LIMS (Laboratory Information Management System) – BioMed LIMS is an Enterprise Application that provides the functionality to manage all the processes of a Medical Laboratory. The basic idea behind the application is to manage Patient's Demographic & Medical Information, create Requisitions, manage Specimens using Barcodes, Test Report & Bills Automation, inform the Patient's Physician using FAX or Email, maintains the patient Accession History and also generate graphical Test Reports for analysis.

CSRPP – Central Seniority Recasting of Punjab Police CSRPP application has specially designed interfaces for navigational purposes and sophisticated formulas for generating powerful results. The application is divided into two modules; one module is designed for gathering data (service particulars of officers) from various units of Punjab Police scattered in whole Punjab. The data entry can be done online as well as offline by the various units using CSRPP. The second module is the core part of application, which is designed for recasting the central seniority of various officers on the basis of seniority criteria of Punjab Police Act & the data gathered from all units of Punjab Police.

FinTech – FinTech is EDPA (Electronics Device Production Automation) company. It has its own Research & Development division and also Production division to design and develop Electronics Circuits. To maintain information of their clients all over the world, maintain information of all products developed by them and automate their internal processes, an Enterprise Application will be developed using Java Technologies. The main objective of this application is to provide an interface for the users using which they can get the information regarding the different electronic devices. To automate different processes involved in the production of an electronic devices: Research, Design, Development.

MedIndex (Current Index of Medical Specialties) – It is an application which will keep a large knowledge base of medicines. The main objective behind the application to develop a search engine which allow users to look around the medicines available in the market containing specific salt. Application is intended to target the general public like pharmaceutical companies, physicians, chemists and patients, who are concerned with medicines in any way.

VigilantEye – It is a product to provide the complete Surveillance solutions. It provides the tools that communicate with IPCameras to display live feed. Provision of saving the live feed will also be provided in this system. VigilantEye is intended to target private or government organizations, schools, colleges, hospitals etc. VigilantEye customers will be able to centralize and automate their surveillance. Tools will be developed for customers using which customers would be able to:

- Test IP Camera installed on their premises.
- View & Save videos by capturing live feed coming from IPCamera.
- Upload the saved videos to a central repository.
- View saved video on web pages.

Alphanizer – It is a social networking based web application intended to be a meeting place for users from various backgrounds, cultures and with different characteristics. It helps people to maintain existing relationships and develop new ones with other users who share same hobbies and interests. 'Alphanizer' proves to be a platform for users to share their photos, videos and music files with their friends, acquaintances and just about anybody with internet connectivity.

TRMgr (Technical Resource Manager) – TRMgr is an enterprise application that will provide a web interface for technical resources to learn java programming. The resources are WebIDE and Online Java API Documentation. WebIDE is a powerful online programming environment for java programming. It provides an online environment to the users where they can develop, compile and run their java programs without the installation of any java specific softwares and doesn't require any path settings. Online Java API Documentation will provide online documentation for methods of the classes and interfaces in Java API with examples using which the users can easily learn the use Java API specific classes and interfaces.

eOrganization – It is an enterprise application to automate all the processes of an educational organization like engineering colleges. The goal of the application is to keep track of all the things whether they are tangible or intangible, which are coming inside the organization or going outside of the organization, which makes the scope of application vast. eOrganization is the role based application. Different designations of the organization are provided with different access rights.

Enterprise Resource Planning (ERP) System – The ERP system would cater to the requirements in the area of Sales, order and invoicing, production planning, production, inventory, purchase, finance, personnel and payroll management.

Shipping Manager – Web based communication between ERP and non ERP systems.

Document Management System – The system helps in scanning, optical character recognition (OCR), and indexing of between 2 million and 12 million pages of tobacco industry documents. The system then helps in document search, retrieval, indexing, workflow management and distribution.

Titan 3000 – Accounts Receivable Module – Titan 3000 is a fully integrated business solution for the perishable goods industry. The system is broken into the modules such as: Customer Service, Loader, Route Accounting, Accounts Receivable, Commissions, Sales Analysis, Production, Inventory Control, Purchasing and Receiving, Accounts Payable, Cost Accounting, General ledger, External Data Devices (hand-held computers), and a Custom Report Writer.

WDPlus – WDPlus would be a web Product, that will provide a common platform for storing and sharing data online. WDPlus is basically, the ability to store and share data in the form of files on the Internet. The data stored on a WDPlus can be accessed using a web browse (rather than directly like on a network drive).

MemoriesBucket – Share Memorable Pictures MemoriesBucket, is a web based application and is intended to offer creative online photo sharing solutions for allowing the users to organize their captured memories and make them presentable to all the friends in a group. It allows the registered user to make customized album by uploading specific photos. The album created by the user can be private as well as shared. The end user is provided with a user friendly interface to create/manage group(s) for maintaining friends for sharing images with specific rights. It provides a smooth, intuitive interface for the user to create fascinating layouts by selecting background themes and by applying the different attractive themes provided by the application. The registered user can find his/her friends who are already registered with Memories Bucket. He/she is also allowed to invite new friends to join Memories Bucket. User can comment on the photographs which are available for viewing. The application also provides a smart tool (windows application), which allows the registered users to manage the pictures/albums without using web application.

a2zwireless – a2zwireless is a web application provides the online mobile shop to the users. Company has integrated the Search and Comparison module to provide the user with extensive search capability on the basis of pre defined search parameters. User can compare features of different phones.

ImpactMailer – ImpactMailer is a web Product, that can be integrated in any web application for sending mass emails. ImpactMailer is for the usage in professional environment that's why ImpactMailer provides the capability of customizing a mail that is to be sent to a number of recipients. It will also provide the capability of customizing a mail with a help of a template or user can create his/her own template for the mail. ImpactMailer will also provide the capability of saving a mail in to drafts so that a user can start from where he left.
